

CCTV Test Target

Our new, easily portable Test Target sets a new standard for optimising camera performance in CCTV systems. Designed with 'user-friendliness' in mind

NORMAN (the National Operational Requirement Mannequin) is a lightweight, quickly erected structure supplied in a custom made aluminium carry case of just 600mm x 430mm x 170mm. This case cleverly doubles as a stable base for the Target when in use.

Several new design features include a full colour graphic and accurately sized motor vehicle licence plates. These can be adapted for use in different regions of the world by substituting local car registration plates and facial features from other ethnic groups.

Quickly and easily check the following parameters in 'real world' conditions:

- Image Height Ratio
- Resolution Focus
- Colour Rendering
- Facial Recognition
- ANPR
