CCTV Editing & Enhancement

VMS have invested heavily in specialist video editing equipment and skills necessary to serve the demanding requirement for processing recorded CCTV images into evidence that is fit for purpose.

The video processing software employed by VMS is used extensively by police and law enforcement agencies throughout the UK enabling analysts to extract and optimise raw images into credible evidence for submission in court.

The VMS CCTV forensic editing service is provided on an individual project basis or as a negotiated annual contract if appropriate.

Individual projects are subject to the VMS Forensic Service Agreement; this is supplied in a package including project documentation and secure evidence transit packaging.

On receipt of; the images (normally on CD, DVD or Video Tape), completed documentation and preliminary analysis fee of £128 + VAT we will review the project and quote a fixed fee for processing. Any attendance as Expert Witness will be charged at current day rates plus expenses.

The VMS CCTV forensic editing service capabilities include the ability to capture, process and output de-multiplexed, uncompressed video images that can track highlighted subjects of surveillance or electronically mask unconnected individuals.

Often CCTV images are badly compromised by a lack of lighting, excessive sunlight, artificial lighting interference, subject movement etc. What appears to be totally useless as evidence can often be corrected by application of the following techniques;

- Field Alignment
- Colour Correction
- Brightness & Contrast
- Highlighting
- Masking
- Image Equalisation
- Interference Reduction
- Picture Alignment
- Storyboard & text
- Image Framing

To view the above techniques go to our website www.vmscctv.co.uk
