

# Secure DVR Enclosures

Both the LIE-01F & LVE-01F are constructed from seam welded 1.6mm mild steel for extra strength. The front and top panels are removable to facilitate secure fixing and access to the DVR. Locating dimples in the lid and base allow the units to be securely stacked. A 7 pin radial cam lock secures the drop down front panel.

Generous cable entry cutouts, plenty of space for wiring and connectors plus a lift off lid make for efficiency in both installation and maintenance.

The Budget LVCR-09F is constructed from pop riveted 1.5mm mild steel with a removable front panel secured by a 7 pin radial cam lock.

**All VMS enclosures are supplied with 220Vac cooling fans as standard.**

### VMS VENTILATED ENCLOSURE TEST RESULTS

Hard drive  
 VMS Video Recorder Enclosures are fitted with electric ventilation fans and ventilation slots that enable the following maximum temperature differential to be achieved.

□  
 (The maximum recommended temperature in the workplace is 30 degrees C).

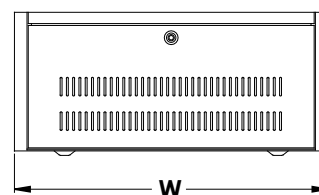

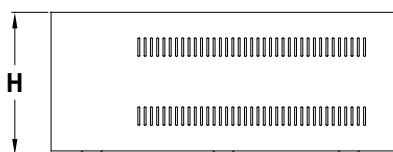

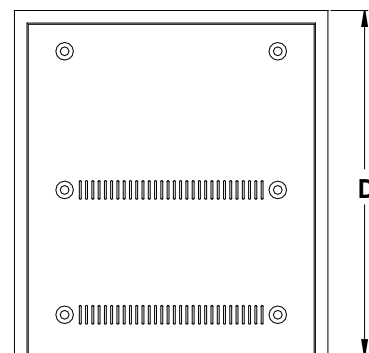

The temperature reading measured inside the enclosure after a period of 24 hours was 34.6 degrees C.

Th□  
 The enclosure performed well within DVR manufacturer's most commonly quoted recommended maximum operating temperature of 45 degrees C, and Hard Drive Manufacturers recommended 55 degrees C.
